INTEGRATION MANUAL

APPLICABLE DEVICES AND FIRMWARE

Device	Firmware	Abbreviation used in this document
BioShake 3000 Series BioShake 5000 Series BioShake D-30 Series HeatPlate	≥ 1.6	BS
BioShake Q1 BioShake Q1 3mm BioShake Q2	≥ 1.0	TC*
ColdPlate ColdPlate slim	≥ 2.4	TC*

^{*} The abbreviation TC stands for Thermo Control. This is related to the ability of all the devices in the two rows (BioShake Q1 ... ColdPlate slim) to heat and cool. All these devices therefore have an adapted set of commands due to the underlying firmware.

1. INTRODUCTION

QINSTRUMENTS devices are optimized to be integrated seamlessly into automation platforms. The simple and over all our devices standardized command set allows you to easily set and control process parameters and read out sensor values. Through the integrated microelectronics no other external components or control devices are necessary. All units are designed for continuous 24 hour hands-free operation when utilizing sound scientific methods

Providing long term stable hard- and software interfaces and supporting industry standard like SiLA®, paves the way to a superior level of lab automation. Due to the outstanding integration support we are happy to call the leading providers for lab automation our partners.

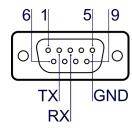

If not stated otherwise, the presented information applies to all applicable QINSTRUMENTS devices (see: "Applicable Devices and Firmware" on page 2). In case there are differences between the devices or the information just applies to a certain type this will be marked.

2. COMMUNICATION INTERFACE

2.1 HARDWARE

The RS232 interface is available through the 9-pin D-subminiature connector. Pins 2 (TX), 3 (RX) and 5 (GND) on the connector are used (see picture below).

Baud rate	9600
Parity	None
Data bits	8
Stop bits	1
Hardware or software handshake (XON/XOFF)	Not supported

The power connection is realized via a barrel connector (ID 2.5 mm x OD 5.5 mm). For all devices the power supply must fulfill the following requirements. Only use the delivered power supply (Mean Well GST120A24) to fully stay within the device certification.

Input	100 - 240 V AC 50 - 60 Hz
Output	24 V DC Imax: 5.0 A Pmax: 120 Watt
Approvals	CE/UL/CS, 85-264 V AC, 47-63 Hz IEC/EN60320-1 C14

2.2 SOFTWARE

The device functions and parameters are controlled via the commands which are provided by QINSTRUMENTS and are explained in detail in chapter: "Software Interface" on the next page. Keep in mind that these commands are just the building blocks for a device driver. It is required to deal with device errors, logging, communication errors and lags, command timings and so on to realize a stable, solid and productive devices control. Additionally specific requirements that are related to the platform in which the unit is integrated might need to be addressed.

Device driver development efforts can be reduced by using the provided SiLA® driver (Order no. 2016-0200).

SiLA® is the global initiative to standardize software interfaces in the field of life science research instrumentation. Instigated by the pharmaceutical industry's need for flexible laboratory automation, the initiative is supported by major device and software suppliers worldwide.

Information is available at: https://sila-standard.com/

3. SOFTWARE INTERFACE

3.1 GENERAL INFORMATION

Information	BS	TC
All commands need to be terminated with: <cr>*</cr>	0	0
All return values are terminated with: <cr><lf>**</lf></cr>	0	0
Sending an unknown command returns: u->'unknown command' <cr><lf></lf></cr>	0	0
Target speed will be set to 0 rpm after any kind of stop command (soff, seoff,) and needs to be set anew before each start of mixing.	0	0
Target acceleration (ssa <value>) needs to be set anew after restarting the device. The value is not saved to EEPROM.</value>	0	0
If the device has an error or the command which is send interferes with the current status of the device, the device returns: e <cr><lf>***</lf></cr>	0	0
If an error occurs (smart LED turns red), the device must be reset, to clear its internal failure memory and continue working normally.****	0	0
When the power supply is connected and active, the system is automatically started (boot process) and all hardware components will be checked. This process takes about 5 seconds for the Q1 and CP devices and about 30 seconds for the BS devices.	0	0
After setting a parameter value or changing the device status with a set command, recheck the parameter value status with the related get command. This ensures a correct operation of hardware and software.	0	0
The waiting time for status requests with get command is minimum 100 milliseconds.	0	0
Between two sent signs may be a maximum of 5 seconds. After 5 seconds and without receiving a termination character <cr>, the internal receiver unit is reset and waits for the first character of the next instruction.</cr>	-	0
If no communication cable (RS232 cable) is connected, the smart LED turns yellow.	-	0
If the shaker is not used for longer than 15 min, please switch to the ECO mode with the command setEcoMode <cr> to save energy and decrease abrasion. Wake up the shaker with leaveEcoMode<cr>.</cr></cr>	О	-

O | - Applicable function | Not applicable information

^{* &}lt;CR> is the term for the control character "carriage return" in ASCII code (decimal 13, hexadecimal 0x0D)

^{** &}lt;LF> is the term for the control character "line feed" in ASCII code (decimal 10, hexadecimal 0x0A)

^{***} Getting e as return value does not necessarily mean that the device has an error. Device errors are written to the error list, which can be accessed with the gel command. An example for status interference is when the command shakeon is send while the device is already shaking.

^{****} Exception: The error 33020 required to switch the device on and off (separate from power supply). A software reset is not enough. (see: "Error Codes" on page 16)

Information BS TC

The following commands (if applicale to the device) are changing a shaker parameter permanently. This means the value is saved to EEPROM and kept even if the device is powered off.

3.3 COMMAND DETAILS

Command <pre>Command description</pre>	<example execution=""><cr></cr></example>		<example return="" value=""><cr><lf> Additional information</lf></cr></example>	BS	<u>T</u> (
disableBootScreen	disableBootScreen	>>	ok	-	(
Permanent deactivation of the boot screen startup text.					
disableCLED	disableCLED	>>	ok	0	
Permanent deactivation of the LED indication lights. The ins	strument will reset after this command.				
enableBootScreen	enableBootScreen	>>	ok	-	
Permanent activation of the boot screen startup text.					
enableCLED	enableCLED	>>	ok	0	
Permanent activation of the LED indication lights. The instr	ument will reset after this command.				
flashLed fled	flashLed	>>	ok	-	
User device LED flashes five times.					
getCLED	getCLED	>>	1	-	
Returns the status LED state.			1 LED is enabled		
			2 LED is disabled		
getDescription	getDescription	>>	Q.MTP-BIOSHAKE 3000	0	
Returns model type.					
getErrorList gel	getErrorList	>>	{22150; 32022}	0	
Returns a semicolon-separated list with errors and warning	s which can occur during processing.		Note: Please see also section "Error control" in this document.		
getSerial	getSerial	>>	0000012345	0	
Returns the device serial number.					
getVersion	getVersion	>>	1.8.00	0	
Returns the firmware version number.					
info	info	>>	<pre><boot screen="" text=""></boot></pre>	0	
Returns the boot screen text.					
resetDevice reset	resetDevice	>>	ok	0	
Restarts the controller.			Note: This takes about 30 seconds for BS units and 5 for the Q1, C	CP model	s
setBuzzer <value></value>	setBuzzer500	>>	ok	-	
Let's the buzzer beep for the given time in milliseconds.			Note: <value> range from 50 to 999</value>		
version v	version	>>	Q.MTP-BIOSHAKE 3000 v1.8.00	0	
Returns model type and fw version number.					

	Command < CR > Short Form < CR > Command description	<pre><example execution=""><cr></cr></example></pre>		<pre><example return="" value=""><cr><lf> Additional information</lf></cr></example></pre>	BS	TC

Ш	setElmUnlockPos seup	setElmUnlockPos	>>	ok	0	0
	Opens the ELM			Note: The runtime is less than 3 seconds.		
				Note: This position is a current-free static state.		
				Note: The ELM should only be used when the tablar is in the hom	e position	1.
				Otherwise it does not open as wide as possible and it is likely that	t the posit	tion
				of the tablar changes, while opening.		

3.4 ERROR CODES

In case of failure the device smart LED turns red and the device error code is accessible via the command: getErrorList

If an error occurred and not stated otherwise the device must be reset to clear its internal failure memory and continue working normally. If the error cannot be solved by restarting the device, please get in contact with our "Support" on page 32

		BS DEVICES
	Code	Description
	101 ¹	Error by the DC motor controller.
9	102	Error due speed failure, for example happens through mechanical locking.
SHAKIN	103	Errors caused by an uninitialized shaker or incorrect initialization parameters after switch on.
H,	104 ¹	Errors caused by unsuccessful initialization routine.
0)	105 ¹	Errors caused by not achieving the home position at stop command.
	106 ¹	Errors caused by over speed.
	201 ¹	Error due failed answers from temperature sensors or incorrect internal settings of temperature sensors.
A H	202 ¹	Error due temperature communication bus system.
2	203	Sensor with the requested ID is not found while working.
ERATUR	204	Errors caused by a faulty temperature measurement while working.
Ë	206 ¹	Error caused by checksum of the internal temperature sensor.
■ B	207 ¹	Error caused by checksum of the main temperature sensor.
믣	208 ¹	Error caused by general checksum.
	209 ¹	Error caused by unknown temperature method.
	210 ¹	Error caused by over heating.
	300 ¹	General error.
	301 ¹	IC-Driver error.
5	303	Verification error by the unlock position.
E Z	304	Error caused by unsuccessful reach the lock position (timeout).
	305	Error caused by unsuccessful reach the unlock position (timeout).
	306	Error caused by unsuccessful reach the lock position (over current).
	307	Error caused by unsuccessful reach the unlock position (over current).

		TC DEVICES
	Code	Description
0	10002 or 10003	Instruction sent with an invalid parameter.
ASIC	100xx ²	Internal firmware sequence failure.
BA	2xxxx ²	Internal MCU periphery error.
_	310xx ²	EEPROM data verification failed.
	320xx ²	Communication with internal temperature sensors failed.
	33010 ³	Device internal temperature too hot.
ш	33020 ^{3, 4}	Emergency shutdown of the temperature fuse has triggered.
U.R	33030	Emergency temperature sensor validation has failed.
RATI	34010 or 34110	FAN-1 or FAN-2 power supply invalid.
R R	34020 or 34120	FAN-1 or FAN-2 has stalled.
MP	34030 or 34130	FAN-1 or FAN-2 airway clogged.
ш	35010	TEC power supply invalid.
—	35020	TEC power supply short circuit detected.
	35030	TEC power supply open circuit detected.
	360xx ²	Internal temperature controller failure.
	37030	Shaker has stalled.
g	37040	Shaker cannot move because the solenoid does not unlock.
Ž	37060	Unable to lock Shaker in the home position.
SHAKIN	37070	"Shaker find home position" timeout occurred.
H.	370xx ²	Internal shake controller failure.
0,	39030	Solenoid motion timeout occurred.
	390xx ²	Internal solenoid controller failure.
5	38030	ELM motion timeout occurred.
	38090	ELM self-test has failed.
	380xx ²	Internal ELM controller failure.

¹ - Please get in contact with the QINSTRUMENTS service team. ³ - Please let the device cool down, before performing a reset.

² - Value for x can be ignored.

⁴ - The power of the device must be turned off to clear the error.

3.5 EXAMPLE

The following example shows a simple process routine, where the device is brought into home position, the ELM is opened and closed to grab a microplate, shaking parameters are set and the device is started and stopped after a defined amount of time.

This is a working but simplified example (no error handling, communication control, ...) and is hence, not suitable for productive use. In this example Python 3.6.1 and PySerial 3.3 are used.

	Python Code	Print Output	Description
Ŀ	<pre>import serial; import time ser = serial.Serial('COM3', timeout=1)</pre>		Import of required python modules Open the connection to COM-Port 3 where the device is connected to
<u> </u>	<pre>ser.write(b'getShakeState\r'); time.sleep(0.2) print(ser.read(ser.in_waiting))</pre>	3 <cr><lf></lf></cr>	Get device status to check if device reached home position; Wait 0.2 seconds before read the command response Device is in home position
2	<pre>ser.write(b'setElmUnlockPos\r'); time.sleep(3) print(ser.read(ser.in_waiting))</pre>	ok <cr><lf></lf></cr>	Open ELM; Wait at least 3 seconds to execute ELM movement Command was executed successfully
111	<pre>ser.write(b'getElmState\r'); time.sleep(0.2) print(ser.read(ser.in_waiting))</pre>	3 <cr><lf></lf></cr>	Get ELM status; Wait 0.2 seconds before read the command response ELM is open

Place the microplate on the device

Σ	<pre>ser.write(b'setElmLockPos\r'); time.sleep(3) print(ser.read(ser.in_waiting))</pre>		Close ELM; Wait at least 3 seconds to execute ELM movement Command was executed successfully					
Ш	<pre>ser.write(b'getElmState\r'); time.sleep(0.2) print(ser.read(ser.in_waiting))</pre>	1 <cr><lf></lf></cr>	Get ELM status; Wait 0.2 seconds before read the command response ELM is closed					
	<pre>ser.write(b'setShakeTargetSpeed1500\r'); time.sleep(0.2) print(ser.read(ser.in_waiting))</pre>	ok <cr><lf></lf></cr>	Set mix velocity to 1500 rpm; Wait 0.2 seconds before read the command response Command was executed successfully					
	<pre>ser.write(b'setShakeAcceleration5\r'); time.sleep(0.2) print(ser.read(ser.in_waiting))</pre>	ok <cr><lf></lf></cr>	Set time for acceleration/deceleration to 5 seconds; Wait 0.2 seconds before read the command response Command was executed successfully					
9	<pre>ser.write(b'shakeOn\r'); time.sleep(7) print(ser.read(ser.in_waiting))</pre>	ok <cr><lf></lf></cr>	Start mixing; Wait 7 seconds (5 sec. acceleration + extra time) before read the command response Command was executed successfully					
MKIN	<pre>ser.write(b'getShakeState\r'); time.sleep(0.2) print(ser.read(ser.in_waiting))</pre>	Ø <cr><lf></lf></cr>	Get device status to check if device is shaking; Wait 0.2 seconds before read the command response Devise is running					
SH	<pre>ser.write(b'getShakeActualSpeed\r'); time.sleep(0.2) print(ser.read(ser.in_waiting))</pre>	1490.000000 <cr><lf></lf></cr>	Get device speed as additional check of status; ; Wait 0.2 seconds before read the command response Set speed is reached					
	time.sleep(60)		Keep mixing for 60 seconds					
	<pre>ser.write(b'shakeOff\r'); time.sleep(7) print(ser.read(ser.in_waiting))</pre>	ok <cr><lf></lf></cr>	Stop mixing; Wait 7 seconds (5 sec. deceleration + extra time) before read the command response Command was executed successfully					
	<pre>ser.write(b'getShakeState\r'); time.sleep(0.2) print(ser.read(ser.in_waiting))</pre>	3 <cr><lf></lf></cr>	Get device status to check if device stopped; Wait 0.2 seconds before read the command response Devise is stopped and is locked at home position					

3.6 EXTENDED PROGRAMMING INFORMATION

This chapter presents additional information on programming while using the device commands.

Return value 'e'

Information

It is important to know that there are several situations in which the return value of a command is e, although there is no error in the device error list. This is due to point that the return value e is also returned if the command does not fit to the current status of the device or other criteria.

Examples are:

- Sending son or sonwr if speed is not set
- Sending son or sonwr command while Shaker is already running.
- Sending son or sonwr command while the ELM is open
- Most commands while in ECO mode
- seup while ELM is already open and the other way around
- ton while temperature control is already running
- ...

Tip

Use the get commands (getShakeState, getTempState, getElmState) to evaluate the current device status before sending commands to prevent erroneous usage of commands.

setElmLockPos | setElmUnlockPos | setEcoMode

Information

After sending the command setElmLockPos, setElmUnlockPos, setEcoMode the device does not send an immediately response. The ok value is written to the serial input buffer after the ELM reached the (un)lock position, ECO mode. In the meantime, all commands that are send to the device will be buffered and executed after the device reached the new status.

Tip

To determine the end of the setElmLockPos, setElmUnlockPos, setEcoMode command, read from the serial input buffer until the ok value is received. Do not send any commands in the meantime.

leaveEcoMode | resetDevice

Information

After sending the command leaveEcoMode, resetDevice the device immediately writes ok to the serial input buffer although the change of the status has not finished and commands that are send in the meantime will not be executed or return e.

Tip

To determine the end of the <code>leaveEcoMode</code>, <code>resetDevice</code> command poll for the device status with the <code>getShakeState</code> command until it reaches the status 3 (Shaker stopped and is locked in home position).

4. HARDWARE INTERFACE

4.1 DEVICE INSTALLATION

All QINSTRUMENTS devices are mounted via the same physical interface and have one corner for the cable outlets, as can be seen in the schematic top view on the device, below.

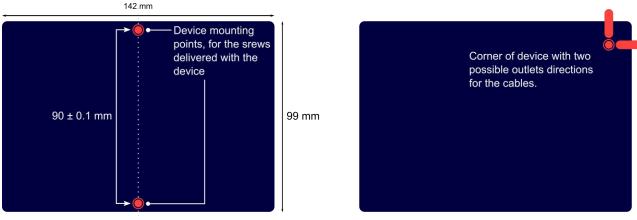

Figure 1 Schematic device top view showing the mounting points and cable outlet options

Besides mounting, other important aspects like the

- cable length (2 m by default)
- sufficient venting for devices with heat/cool feature
- deal with condensation water for devices with cooling feature
- space between Shakers if multiple Shakers are integrated (space for ELM movement, air inlet and outlet, other Labware nearby, ...)
- height of adapters
- robot specific requirements (device height, clearance, collision areas, ...)
- ...

need to be addressed when integrating one or multiple devices. A detailed description about the installation procedure, in depth device specifications and further device specific information is available in the device specific Operation manual.

Required device installation information for each device is available online at: https://www.qinstruments.com/service/downloads/
This information is mandatory required to successfully integrate a device.

4.2 DEVICE FEATURE OVERVIEW

In the table below an overview of the most important device features is presented. These features and the related requirements must be taken care of, for a successful integration approach. Especially for devices that can **heat/cool** or are equipped with an **adapter** the impact for additional space and venting must be considered. Please use the Operation Manual of the device for further information.

Detailed device specification are available for each product on our homepage and as a technical data sheet and Operation manual https://www.qinstruments.com/service/downloads/

	Article name	Part number	Link to Manual	ELM	Orbit* [mm]	Speed** [rpm]	Heat	Cool	Adapter is usable	Width [mm]	Length [mm]	Height*** [mm]

^{*} Amplitude = 0.5 x Orbit

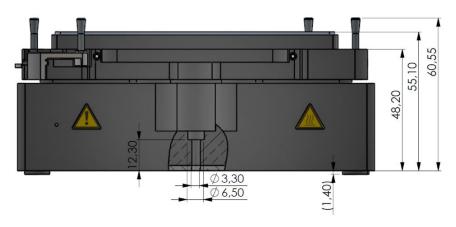

^{**} The given value is the maximum speed of the device The minimum speed for all devices is 200 rpm. The actual speed that should be used, strongly depends on several parameter like the adapter and microplate that is used, the amount of liquid and much more. It will therefore be potentially lower. Please refer to the Operation Manual of your device for further information.

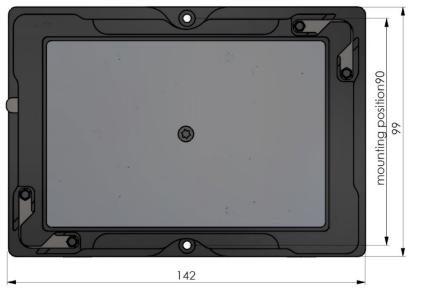

^{***} The given value is the maximum height of the device. This encompasses the standard pins but **not** the adapter that might be mounted and **not** the rubber feet (height of 1.4 mm)

5. TEST SOFTWARE

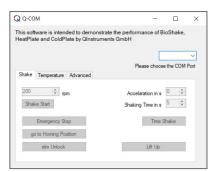

5.1 QCOM 1

QCOM1 is a simple test tool for Windows to start using the shaker in moments and to exercise all shaker features. Plug in the RS232 cable from the single BioShake module into a free port of your computer. If it's necessary, please use a USB/RS232 converter.

Download is available at

https://www.qinstruments.com/service/downloads/

5.2 QCOM 2

QCOM2 is a small test software with a graphical user interface (GUI) to control lab automation instruments from QINSTRUMENTS, eg. BioShake, ColdPlate, HeatPlate.

The main purpose of QCOM2 is to get easy access to the unit to execute initial testing.

Download is available at

https://www.qinstruments.com/service/downloads/

To start the program, execute QCOM2.exe. By default, the program scans through the available COM ports and detects if a supported QINSTRUMENTS device is connected to that port. The first valid device that is found is used, the scanning process is stopped, and the program starts using the identified device. Device features will be detected at start-up, and the GUI will be adapted to the following features: mixing, ELM, temperature control.

For more details on how to use the software, please refer to the manual that is part of the QCOM2 download.

Integration Manual

6. CHANGELOG

Version	Information
010.4	Added Q1 3mm, Q2 CP, Q1, Q1 3mm, Q2 forming a new group: TC (thermo control) Update QCOM 2 pic Prog. example fixed
010.3	Fixed error in command list and description <getserial> Fixed error in <setelmstartupposition>, <getcled> description</getcled></setelmstartupposition></getserial>
010.2	Fixed error in error number Fixed links to Operational Manuals Added Information for constant change of parameters
010.1	Improvement of spelling mistakes
010.0	 Initial Creation Merge of two distinct Integration Manuals for BioShake devices with cooling feature and without New design integrating BICO branding

7. NOTES

8. SUPPORT

We provide a range of technical material (e.g., application notes, poster, bulletin, data sheets) that describes our products and key applications in detail. All of our technical documents are available on our web page in the corresponding product pages. Technical Data Sheet, Operation manual, 2D and 3D drawings and Software can be found in the download area of each product.

Please use the following link to our support form (https://www.qinstruments.com/service/support/) in case service or support for your product is needed. Please ensure to provide the serial number, as it is an important information for our support team. Direct contact via phone or email is also possible.
